# Setup quiz

Run the following cell displaying your git info:

```
In [ ]: !git config --list
```

```
user.name=Daniel
user.email=dyk6704@vt.edu
init.defaultbranch=main
core.editor=code --wait
core.repositoryformatversion=0
core.filemode=false
core.bare=false
core.logallrefupdates=true
core.symlinks=false
core.ignorecase=true
submodule.active=.
remote.origin.url=https://github.com/CHEM-PHYS-X684/QuantumSoftware.git
remote.origin.fetch=+refs/heads/*:refs/remotes/origin/*
branch.main.remote=origin
branch.main.merge=refs/heads/main
lfs.repositoryformatversion=0
```

Let's see which conda version we have installed

```
In [ ]: !conda --version
```

```
conda 23.11.0
```

Make sure that you have activated the conda environment you set up for this class, and then execute the following command:

```
In [ ]: !which python
```

```
/home/dyk6704/miniconda3/envs/molssi_best_practices/bin/python
```

And which version of Python do you have?

```
In [ ]: !python --version
```

```
Python 3.11.7
```

Which cookiecutter?

```
In [ ]: !which cookiecutter
```

```
/home/dyk6704/miniconda3/envs/molssi_best_practices/bin/cookiecutter
```

```
In [ ]: !cookiecutter --version
```

```
Cookiecutter 2.5.0 from /home/dyk6704/miniconda3/envs/molssi_best_practices/lib/pyth
on3.11/site-packages (Python 3.11.7 (main, Dec 15 2023, 18:12:31) [GCC 11.2.0])
```
